

# Call In for Clean Air

The State of the Air Report in 2014 ranked Los Angeles as having the worst smog pollution in the country.

The region suffers from some of the highest levels of particulate matter (PM) in the nation

The SCAQMD has not met the Environmental Protection Agency's federal standard for ozone pollution since 1979.

Join us in the in-person or virtually  
Clean Air Town Hall

We will be discussing our air quality problem and what solutions can bring clean air to our region.

Panelists will discuss air quality related issues, and what solutions can be implemented to move us forward. Also, they will have the opportunity to outline what work has been done to better the regions air.

Come learn how poor air quality affects you, and how you can advocate for more clean air.
